

Company Introduction

Sim Local is an entrepreneurial company which creates problem-solving travel technology brands. Our sister company NetLync is a technology company helping mobile network operators support eSIM and the next wave of connected consumer devices. Our brands are always the fastest, most intuitive way to ease the user journey and meet user experience needs. What we do is a win, win, win – a win for the user, for our partners, for our shareholder and staff because we're on this adventure together. Through our Sim Local and NetLync brands, we are pioneering a digital transformation of SIM card technology across the mobile & IoT industry and digital retail channels with an emphasis on eSIM Technology and using leading edge digital retail technologies – check out <https://www.simlocal.com/> and <https://www.netlync.com/> for more detail.

The Role

This role is a great opportunity for a dynamic individual who thrives on working in a small but fast-paced, highly flexible entrepreneurial environment. You will be part of a high performing Agile Software Engineering Team supporting our proprietary UNITE platform. The role will suit a self-starter looking to work in an autonomous environment. We are a small closely-knit organisation, so your contribution will have a direct impact to the success of all the teams in the organisation. You will interact with our teams based in Dublin, London, Vancouver as well as global mobile operators, infrastructure providers, device manufacturers and our international retail partners. You will get exposure to cutting edge technologies whilst working within a dedicated and expanding team environment, where you can shape your own future with us.

Job Description

Due to continued success and growth, we are expanding our development team and are now looking for a DevOps Engineer with a programming background ideally with Python or Java to join our Engineering team. The role will be building the DevOps Continuous Improvement, Continuous Delivery platform and coding framework that underpins our core products. This role will be supporting the DevOps Lead in maintaining the platform/ framework/ DevOps culture.

We are looking for someone who is passionate about automation, creative and innovative, with a track record of fully automated cloud Infrastructure and CI/CD application pipelines. You must be able to demonstrate a mindset for Open Source technologies and have implemented continuous improvement / continuous delivery effectively. The ideal candidate will be comfortable with

AWS DevOps Engineer Job Brief

infrastructure automation as well as Application Continuous Delivery, applied to Java, Python and JavaScript technologies.

Responsibilities

- Handle Infrastructure as code, contributing to making our infrastructure fully automated, simple, reliable, and easy to operate
- Awareness of industry direction and trends in infrastructure as code tooling and best practices
- Develop and implement systems that aid and facilitate our rapid growth including the implementation of deployment policies, future procedures, configuration management and planning for capacity upgrades
- Design, operate and automate operational tasks, such as Networking configuration, Server provisioning, backup/restore, disaster recovery, monitoring and alerting
- Implement an on-going cloud cost optimisation process
- Implement security best practices
- Working with your agile team colleagues, your technical leaders and the Scrum Master and Product Owner to build quality solutions that are capable of long-term testability and growth whilst delivering focused, value driven changes to a high-quality standard
- Help the team avoid performance bottlenecks, security vulnerabilities and help with architecture decisions while ensuring that applications and services run quickly, efficiently and securely with minimum oversight
- Lead and maintain a clear task backlog with Jira

Required Skills

- Bachelor's degree in computer science or other relevant discipline or equivalent work experience
- Up to 3 years' experience in DevOps/Software Configuration Management role
- Programming experience required, preferably Python
- Work with Amazon Web Services technologies
- A willingness and enthusiasm to improve and develop new skills and learn new technologies

AWS DevOps Engineer Job Brief

- CI/CD and test automation experience
- Good Linux experience
- Some experience:
 - Managing the cloud infrastructure as code, using either CloudFormation or Terraform.
 - Maintaining highly available and performant environments.
 - Some exposure to Monitoring tools, such as Sumologic, Datadog, Zabbix, Nagios, New Relic.
 - Managing and deploying AWS Load Balancers, RDS, Route 53, CloudFront, S3.
 - Managing and deploying Serverless applications: Lambda, API Gateway, DynamoDB
- Networking, network security and have a good knowledge of TCP/IP
- Automated builds and deployments experience.
- Experience working for a developer audience is desired
- Experience working in a cross functional Scrum team in an agile environment
- Solid English communication skills

Other items of note

- Our Technology Team is managed across 2 locations, our HQ Office at Beacon Court, Sandyford, Co Dublin, Ireland and our HQ Office Vancouver Canada
- Our Retail Operations are based in our London Office at One Heathrow Boulevard, West Drayton, London
- Our eSIM Solution Business Development is headquartered in Vancouver, Canada
- We work in an Agile team environment, directed by a business-based product owner and a scrum master. Sprints are fortnightly and useful, working software is expected to be produced at the end of each sprint. All development efforts follow Agile principles closely.
