

Company Introduction

Sim Local is an entrepreneurial company which creates problem-solving travel technology brands. Our sister company NetLync is a technology company helping mobile network operators support eSIM and the next wave of connected consumer devices. Our brands are always the fastest, most intuitive way to ease the user journey and meet user experience needs. What we do is a win, win, win – a win for the user, for our partners, for our shareholder and staff because we're on this adventure together. Through our Sim Local and NetLync brands, we are pioneering a digital transformation of SIM card technology across the mobile & IoT industry and digital retail channels with an emphasis on eSIM Technology and using leading edge digital retail technologies – check out <https://www.simlocal.com/> and <https://www.netlync.com/> for more detail.

The Role

This role is a great opportunity for a dynamic individual who thrives on working in a small but fast-paced, highly flexible entrepreneurial environment. You will be part of a high performing Agile Software Engineering Team supporting our proprietary UNITE platform. The role will suit a self-starter looking to work in an autonomous environment. We are a small closely-knit organisation, so your contribution will have a direct impact to the success of all the teams in the organisation. You will interact with our teams based in Dublin, London, Vancouver as well as global mobile operators, infrastructure providers, device manufacturers and our international retail partners. You will get exposure to cutting edge technologies whilst working within a dedicated and expanding team environment, where you can shape your own future with us.

Job Description

Due to continued success and growth, we are expanding our Platform Engineering team and are now looking for a talented Senior Software Engineer to join our team who is highly motivated in combining the art of design within the art of programming. In joining our Platform Engineering team, you will play a key part in the continual research, design and development of our core products. This role will be supporting the Platform Engineering Manager in maintaining the platform/ framework/ DevOps culture.

We are looking for someone who is motivated by emerging technologies and has a passion to drive technology transformation. You will be working with a team of engineers and testers to create solutions and deliver both mobile and web applications to our Client base. The ideal candidate is

Front End Software Engineer Job Brief

someone who has a track record of high-quality delivery, combined with a keen appetite for all aspects of software development. A strong emphasis on testing is desired as it is an important part of a well working team and a core part of the product itself. You will have the opportunities to recommend and champion the use of new technologies whether for direct use in products or in supporting the development lifecycle. You should be hands on, able to contribute individually and should have experience within a fast pace dynamic environment.

Responsibilities

- Experience working closely with key stakeholders across the engineering team, including Architects, Product Owners and UX designers understanding and demonstrating how written requirements translate into a technical solution
- Strong experience in developing interfaces for web and mobile applications with a passion for quality UX/UI design.
- Develop high quality, efficient, reusable code and libraries for future use
- Follow the agile development methodologies and practices
- Exchange information and ideas with the team, evolve and model the new user-facing features
- Constantly improve the products, through feedback and input on the product pipeline and roadmap
- Working with your agile team colleagues, your technical leaders and the Scrum Master and Product Owner to build quality solutions that are capable of long-term testability and growth whilst delivering focused, value driven changes to a high-quality standard
- Maintain a clear task backlog with Jira

Required Skills

- Bachelor's degree in computer science or other relevant discipline or equivalent work experience
- 3 to 5+ Years Front End Development experience
- Experience working in an Agile development environment
- Excellent communication skills both written and verbal
- Strong JavaScript, HTML5 & CSS skills.

Front End Software Engineer Job Brief

- Experience building user interfaces with React
- Experience with CSS pre-processing tools such as Sass
- Experience unit testing (with Jest is a bonus)
- Experience with git source code control, code review tools, etc.
- CI/CD and test automation experience
- UX/UI Design experience
- Good Linux experience
- Some automated builds and deployments experience.
- Experience working for a developer audience is desired
- Experience working in a cross functional Scrum team in an agile environment
- Solid English communication skills

Other items of note

- Our Technology Team is managed across 2 locations, our HQ Office at Beacon Court, Sandyford, Co Dublin, Ireland and our HQ Office Vancouver Canada
- Our Retail Operations are based in our London Office at One Heathrow Boulevard, West Drayton, London
- Our eSIM Solution Business Development is headquartered in Vancouver, Canada
- We work in an Agile team environment, directed by a business-based product owner and a scrum master. Sprints are fortnightly and useful, working software is expected to be produced at the end of each sprint. All development efforts follow Agile principles closely
